

DeepVision AI

Job Title: Machine Learning Engineer

Location: Berlin, Germany / Fully Remote | Salary: €90,000 – €120,000

About Us / Company Overview

DeepVision AI develops computer vision solutions for industrial quality inspection. Our edge-AI platform is deployed across 200+ manufacturing sites globally. We are a Series A startup backed by top European VCs.

Key Responsibilities

- Develop and optimise CV/ML models (detection, segmentation, classification)
- Build MLOps infrastructure: training pipelines, model registry, monitoring
- Deploy models to edge hardware (NVIDIA Jetson, Coral TPU)
- Collaborate with hardware & embedded teams
- Conduct performance benchmarking and profiling
- Maintain Python packages and internal ML libraries

Requirements / Must Have

1. 4+ years ML engineering experience
2. Deep expertise in PyTorch or TensorFlow
3. Experience with computer vision (YOLO, ResNet, etc.)
4. MLOps tooling: MLflow, DVC, Weights & Biases
5. Strong Python & software engineering practices
6. Experience deploying models in production

Nice to Have (Preferred)

- CUDA / GPU programming experience
- Edge AI / TensorRT / ONNX optimization
- Familiarity with C++ for inference
- Experience with Kubernetes & Helm for ML deployments
